Profile :

Presently, I am holding position of Director (I/C), School of Computer Science, Yashwantrao Chavan Maharashtra Open University Nashik.

I am Associate Professor in the school and having over 35 years of experience of teaching, implementing computer programmes in Maharashtra and research experience in the field of computer science.

I started my career on **Zilog 80 computer** having 8 k memory and proprietary operating system. Before joining this university I was lecturer in KTHM College, Nasik for BCS and MCS course. In early days of the university many ideas brainstorming and training activity were going on about how to reach to unreached people. I am glad that I got opportunity to contribute in it and developed the **First Workbook** for **First Computer Programme** of the university. School started implementing computer programme from Nashik region and expands it slowly across the Maharashtra state.

The development of new programmes and implementing it in the state is prime responsibility. We started BCA and B.Sc.(BIS) degree level programme in innovative way (cafeteria approach), module-wise number of course were made available to the learners and they can select courses of their choice. Moreover these student centric programmes were offered through **Online Mode**. In early days when internet was just emerging and penetrating in Indian society it was challenging to implement online programmes but we did it successfully. Before that as part of computerization and simplicity **OMR** base examination of thousands of learner were conducted and result were declared within week's time. To fulfill the need of higher education of Poly-technique diploma holders a degree programme was developed B.Sc(Industrial Science). Presently MCA at PG Level and BCA, BBA(BPM) and BSc(CSA) at UG level programmes are implemented

From the beginning university understand the importance of computerization. Being a member of **Technical Advisory Committee** I am deeply involved in computerization of university. I performed major role in computerization of almost all activities of university. As result we have structured fiber-optic cabling in the campus. In early days for successful computerization, **Training of University Staff** is vital. I played important role in computer training of staff.

Education is considered of utmost importance to the **tribal's** because it is crucial for total development of tribal communities. Education determines their prosperity, success and security in life. To pursue this Philosophy University started free **Computer Education through Mobile Van**. I was the in-charge of this project. A Van is equipped with latest computer lab and high-tech communication devices. This van goes into tribal area with tutors and identifies the beneficiary's to impart computer education. Moreover from headquarter experts also guides them through 2way audio and 1 way video communication.

Similarly, to enhance, empower, motivate the visually impaired and improve their standard of living through computer education. I played major role in computer programme designing and implementing a programme "**Certificate of computer operation for Blinds**". An audio cassette and JAWS software which read all actions of computer is used as a tool to learn.

Major initiatives in computer education in my career are

- Workbook based computer education in early 90s.
- Use Relative Grading for processing of result in early 90s.
- Impart Computer education through private institutes.
- Use of OMR technology in examination.
- Cafeteria approach for course selection in degree programme.
- Online programme registration and examination.
- Development of digital repository.
- Work based Degree programme.
