Entire Document

Yashwantrao Chavan (Maharashtra Open University, Nashik) LAB: Lab Programming Using C++ [CMP703] School of Computer Science

LAB: Lab Programming using C++ [CMP703] Practical 1 Write a C++ program to declare two integer, one float variables and assign 10, 15, and 12.6 to them respectively and then prints these values on the screen.

Practical 2 Activity (a): Write a C++ program to prompt the user to input her/his name and print this name on the screen, as shown below. The text from keyboard can be read by using `cin.get()`, and to display the text on the screen you can use `cout.get()`.

Practical 3 Activity (a): Write a C++ program that prompts the user to input three integer values and find the greatest value of the three values.

Practical 4 Activity (a): Write a program that determines a student's grade. The program will read three types of scores (quiz, mid-term, and final scores) and determine the grade based on the following rules: -if the average score $\geq 90\%$ `<bit> grade=A` -if the average score $\geq 70\%$ and $\geq 90\%$ `<bit> grade=B` -if the average score $\geq 50\%$ and $\geq 70\%$ `<bit> grade=C` -if the average score $\geq 50\%$ `<bit> grade=F`.

Practical 5 Activity (a) Define a class called as circle which has radius as its data member. The class should have following member functions: a. Function to set the value of radius b. Function to get the value of radius c. Function to calculate and return the area of circle d. Function to calculate and return circumference.

Practical 6 Activity (a): Develop a class to represent one digit counter. The class must have data member to represent counter. The class should have following function: a. Function to set the value of the counter b. Function to display value of the counter c. Function to increment the counter d. Function to decrement the counter.

Practical 7 Activity (a): Define a class called as distance represented in feet and inches. The class should have following member function: a. Function to set the distance b. Function to get the distance from user c. Function to display the distance d. Function to add two distances and return the addition.

Practical 8 Activity (a): Define a class Period which has hours and minutes as its data member. Function add to add the periods and return the addition. The function should work as Friend Function.

Practical 9 Activity (a): Create a class to demonstrate use of constructor.

Activity (b): Write a program to demonstrate use of copy constructor.

Practical 10 Activity (a): Define a class that has following data member functions: a. Inc, dec, display b. Constructor with default parameter zero c. Destructor function.

Activity (b): Define a class to overload unary ++ and unary - operator.

Practical 11 Activity (a): Define a class complex to represent complex number. The class should have constructor with 2 default parameters. Create member function `setcomplex()`, `getcomplex()` and `display()` and also operator functions to overload +, -, *, / for carrying out operation with complex number.

Practical 12 Activity (a): Design a class for multilevel inheritance using public and private derivation.

- Practical 13 Pointers Activity (a): Write a program to demonstrate the concept of method overriding, virtual function.
- Practical 14 Activity (a): Design a class FileDemo, open f09 file in read mode and display the total number of line, word and characters.
- Practical 15 Activity (a): Show the implementation of template class library for swap function.

Hit and source - focused comparison, Side by Side

AEC111: English Communication Page 3 VICE-CHANCELLOR'S MESSAGE Dear Students, Greetings!!! I offer cordial welcome to all of you for the degree programme of Yashwantrao Chavan Maharashtra Open University. English Communication is an essential course at degree level. It deals with basic communication aspects required in day to day and in professional life. If you understand this course properly, it will help to coordinate smoothly, solve issues and build good relationships. The process of learning includes appropriate thinking, understanding important points, describing these points on the basis of experience and observation, explaining them to others by speaking or writing about them. The syllabus of this course has been structured in this book in such a way, to give you autonomy to study easily without stirring from home. During the counseling sessions, scheduled at your respective study centre, all your doubts will be clarified about the course and you will get guidance from some qualified and experienced counsellors/ professors. This guidance will not only be based on lectures, but it will also include various techniques such as question-answers, doubt clarification. We expect your active participation in the contact sessions at the study centre. Our emphasis is on „self study“. If a student learns how to study, he will become independent in learning throughout life. This course book has been written with the objective of helping in self-study and giving you autonomy to learn at your convenience. During this academic year you have to give assignments, complete laboratory activities, field visits and the Project work wherever required. You may have to opt for specialization as per programme structure. You will get experience and joy in personally doing above activities. This will enable you to assess your own progress and there by achieve a larger educational objective. We wish that you will enjoy the courses of Yashwantrao Chavan Maharashtra Open University, emerge successful and very soon become a knowledgeable and honorable Master's degree holder of this university. I congratulate "Development Team" for the development of this excellent high quality "Self-Learning Material (SLM)" for the students. I hope and believe that this SLM will be immensely useful for all students of this program. Best Wishes!!! - Dr. Prof. M. M. Salunkhe Vice-Chancellor, YCMOU.

1 Introduction To Data Structures Yashwanth Kannekar kannekar@kannekar.in: Objectives – What is the meaning of Data Structure – Why are they important – What different types exist – How do you select the correct one – Does the selection matter What Are Data Structures – Proper organization leads to efficient access – Examples • Notes in j.wat.gp • Certificates in a file • Chapters in a book • Words in a dictionary – Same is true about storing data in computer – If stored properly, it can be used efficiently ~ So, DS – Storage with motive of efficient use

2 Should I Really Care – I keep getting some of the other Bug in the SW – Slow working of a particular site ~ Asking same data to be entered repeatedly ~ Google search versus others – It takes an eternity to sort data ~ Moral – Good programming begins with right choice of DS Properties Of A Good Data Structure – Permits a variety of critical ops to be performed – Uses less execution time ~ Uses less memory space Common DS – Arrays – Sparse Matrices – Linked Lists – Stacks – Queues – Trees – Graphs 81 9 23 - 8 42 1 - 1 4 7 3 F D A B H J G C 55 63 60 N Data Link Node Node Node 5 - 1 34 12 53 top 10 20 25

3 Which One To Use – Time complexity – Space complexity ~ At times, ease of use ~ At times, operations that we wish to perform ~ All trees, programming language used – Some are suited better for some applications • For B-trees for Databases • Ex. Stacks for function calls Impact Of Good Data Structures ~ Ease of Implementation – Quality of Implementation – Quality of performance Choices Available – Implement Data Structures yourselves – Use standard libraries • C++'s Standard Template Library • Java's Collections Framework • Microsoft's .NET Framework

1 Searching Aang Dani Objectives – Operations performed on an array – What are algorithms – Important features of algorithms – Conventions to follow while writing an algorithm – Linear search and Binary search Algorithm – Method of accomplishing a task in a finite number of steps – Origin – Persian Mathematician – Abu Ja'far Al-Khwarizmi Aka Recipe, Method, Technique, Procedure, Routine – Important Features – Input – Must terminate after finite no. of steps – Each step must be unambiguously defined – Must have zero or more inputs – Must have one or more outputs – All operations must be sufficiently basic – Output – Finiteness – Definiteness – Effectiveness – Types – Repetition using loop – Divide and Conquer – Iterative – Recursive

2 Operations Description – Inverse Processing each element in the array Search – Finding the location of an element with a given value Insertion Adding a new element to an array Deletion Removing an element from an array Sorting Organizing the elements in some order Merging Combining two arrays into a single array Array Operations main() { int a[] = {11, 2, 9, 18, 57, 25, 17, 1, 90, 3}; printf("Enter no. to search: "); scanf("%d", &num); for (i = 0; i <= 9; i++) { if (a[i] == num) break; } if (i == 10) printf("No such number in array"); else printf("Number is at position %d", i); } Linear Search int main() { int a[] = {11, 2, 3, 9, 11, 13, 17, 25, 57, 90}; int i = 0, u = 9, m = num; 57 while (i <= u) { m = (i + u) / 2; if (a[m] == num) printf("No. is at position %d", m); else { if (a[m] < num) u = m - 1; else m = m + 1; } } printf("Element is not present in the array."); } 11 2 3 9 11 13 17 25 57 90 m u printf("Enter number to search: "); scanf("%d", &num);

1 Searching & Frequency Count Using Duni using duniindia.com Objectives - Analyzing an algorithm - Rate of increase for growth rate with respect to Big Oh notation Difficulty Analysis Of Algorithms Determining Time Requirement X Machine dependent X language dependent X Compiler dependent Space Requirement Chapter - Not so relevant Solution X Don't calculate exact time X Calculate approx. no. of ops. for given input X No. of ops a Time X Iterative - WD in loop X Recursive - WD in break & make

2 Algorithm 2 Algorithms 1 Example - Biggest of 4 big = a if (b < b1) big = b and if (c < b1) big = c and if (d < b1) big = d and if return big if (a < b) b1 if (a < c) c1 if (a < d) d1 return a else return d end if else if (c < b1) return c else if (b1 < d) return b else return d end if else if (c < b1) return c else return d end if end if end if 3 comparisons Total What To Count - Multiplication of Matrices - Number of comparisons - Number of multiplications - Number of comparisons - Searching - Sorting - Count of ans in a file for (i = 0 ; i < n ; i++) a [i] = 0 ; while (! ch = getc (fp)) ++ c [ch] ; 500 N Ops. in Loop1 256 = 256 = 256 2268 50000 150768 256 = 256 = 256 Ops. in Loop2 500 + 500 + 500 50000 + 50000 = 50000 (33%) (66%) (1%) (99%) Line no. No. of execution 1 fibonacci () 2 (3) 4 = 1 ; 4 new = 1 ; 5 n = 20 ; 6 for (i = 1 ; i <= n ; i++) 7 { 8 a = old + new ; 9 print ("%d\n" , a) ; 10 old = new ; 11 new = a ; 12 } 13 51 Fibonacci Series 3 1 4 11 0 n - 1 8 n - 1 9 n - 1 11 n - 1 6 n - 1 Total 9 n - 2 Ignoring the const 5 9 2 complexity - O (n)
